

We are seeking a highly experienced Production Manager to work in Wichita, KS. This role is a key partner to ensure the successful completion of customer aircraft modifications at Precision maintenance and repair organization partners throughout the world as we work on our A321 conversion programs.

Duties and Responsibilities:

- Maintain control of the aircraft’s approved schedule, quality and rework, flow execution, budget, and timely delivery of the program and report any foreseeable issues immediately to the 321PC Director of Conversions and MRO Support.
- Promote quality performance, positive financial results, safe work environment and on-time deliveries.
- Attend daily status briefings at the assigned Vendor Maintenance Base, provide Precision support as required as well as hold the MRO accountable to their daily goals.
- Coordinate with materials and logistics team on MRFs/PRFs to ensure no lag in production for the inducted aircraft.
- Work with the 321PC on-site liaison engineers to resolve installation deviations and ensure they are being worked in proper order / sequence to prevent any slowdowns in Production scheduling.
- Ensure inducted aircraft are being maintained at the highest quality and FOD protection is being implemented as needed.
- Point out any “general practices” concerns to MRO management and QA regarding proper installation of mod kit and ensure all quality standards are being met daily. This includes proper fastener layout, drilling, riveting, Hi-Lok and bolt installation, sealant application, and final finish of re-worked assemblies.
- Ensure 321PC parts are being protected and organized by the MRO to ensure efficiency during installation.
- Perform paperwork audits to all completed 321PC work documents (Routine and Non-Routine) to ensure they are complete and correct before being moved to the MRO records department. The Production Manager will coordinate any required corrections with MRO management.
- Coordinate with the MRO Inspection department and Maintenance leadership to assure maintenance is performed in accordance with accepted standards.

- Ensure preservation of all units or parts during the maintenance process and after work is complete.
- Initiate requisitions for stocked material as required through coordination with the 321PC Director of Conversions and MRO Support and PML per scheduling priorities.
- Provide a focal point for all communications relative to the assigned Vendor Maintenance Base.
- Be authorized to act on behalf of 321PC at the assigned Vendor Maintenance Base.
- Assist with any AOG support that may require a Production representative to be present at the aircraft during the AOG and provide sound resolution to the problem at hand.
- Assist with any AOG correspondence via email for troubleshooting and resolving an electrical or systems issue to release the aircraft and see its entry back into service.
- Maintain 321PC Conversion Tooling onsite at the assigned location, keeping inventory and ensuring tooling remains in a serviceable state.
- Travel as required to cover responsibilities.

Requirements:

- Min 10 years of experience in an aviation environment or MRO A321 systems experience.
- Min 5 years of recent supervisory experience at an MRO or commercial aircraft production facility
