

Summary:

Erickson Information Services is looking for a Software Integration Developer to create and maintain internal tools and integrations between various systems. This position will be involved with developing tools for IT, Engineering, and other departments. They will also assist with building data pipelines.

A good candidate will have a solid understanding of software architecture, how to write maintainable code, basic understanding of building secure systems, some familiarity with systems administration, and a desire to learn about various systems and departments. The candidate must be self-motivating and able to pro-actively offer suggestions on improvements and alternate approaches.

This position is a hybrid position requiring an on-site presence with the option of some remote work flexibility.

Duties and Responsibilities:

- Work with the Director of IT and other departments to define specs and scope of work and communicate progress
- Provide estimates for amount of work required
- Develop implementation timelines
- Write documentation (code, implementation, and training)
- Fix bugs
- Maintain programs

Skills & Qualifications

- 2+ years experience in a business development environment or other comparable open source development experience.
- Details oriented
- Excellent communication skills
- Excellent documentation skills
- Proficient in Python
- Experience with writing PowerShell modules
- Basic to intermediate SQL knowledge
- Experience using git
- Basic understating of Active Directory and LDAP
- Experience working with web APIs (REST, GraphQL, etc.)
- Experience with CI/CD (Gitlab a plus)

TO APPLY: Please email your resume to hire@precisionaircraft.com for consideration or apply for the position on Indeed.
